

# **DLCOVER**

## **TENSION COVERS**

### **Your tension cover on every silo**

A tension cover is a custom build cover for a silo, tank or concrete tanks. DL Plastics can advise you about the best cover for your storage, due to many years of experience. The dimensions, foil materials and supportive structures can be custom combined to achieve the best result.

### ***Our 40 years of experience is free of charge.***

### **A tension cover for many purposes**

A tension cover can be used for many types of manure storage systems. It can be used for silos containing manure or (fire)water, but it can also be used for industrial purposes. A tension cover is an almost maintenance free cover for concrete, steel or wooden silos. De tension cover is equipped with a reliable and solid construction to offer protection against all types of weather (such as heavy wind, UV-light and heavy snow). DL Plastics uses KIWA materials which offer excellent protection against dirty water, silt, manure, gasses and other possible influences.

### **Only the best materials are suited for our tension covers**

To offer the highest quality and to ensure the long service life DL Plastics only uses the best materials for our tension covers. High quality reinforced PVC foils are used. For the middle column DL Plastics uses hardwood, PVC, RVS, or concrete depending on the clients wishes. For every silo we can make a custom tension cover. You can choose between the colors grey (better against sunlight) or green. DL Plastics equips the tension cover with the necessary steel valance tubes in the hem to connect the silo, manholes, dripping edge and possible ventilation. The inclination (standard 15° - 18°) can be adjusted in consultation with the customer.

### **All applications for storage and covers**

We offer more than just tension covers. We also make watertight and gas-tight liners for all types of silos, concrete tanks, wells etc. We have many years of experience in concrete protection. We do new construction and renovation. We offer a divers and extended range of foil systems. We produce and develop our own storage systems. Contact us for more information and for a quotation.
